

TRAINING

Hi-Force has been providing training courses in the safe and correct use, application, service and repair of hydraulic tools for many years. In 2013, Hi-Force introduced ECITB (Engineering Construction Industry Training Board) approved training courses. Our UK training school, covering an area of 150 square metres, incorporates a fully equipped classroom, product practical training area and a service and repair training facility.

Hi-Force UK Training Facility

Between 2013 and today, Hi-Force has used the UK training facility as a blueprint for establishing additional training schools at our Regional Offices in UAE, Malaysia, The Netherlands, and in Italy. All Hi-Force training schools worldwide deliver training to the same exacting standards, set by Hi-Force UK and indeed the UK based group training department continually monitors and assesses the standards of training, delivered at all training schools worldwide.

All Hi-Force training courses are designed to provide a first class education, to all delegates, utilising our "state of the art" training school facilities, at all locations. By ensuring that all training courses are delivered to the same standards, using the same training materials and techniques, delegates can attend a Hi-Force training school nearest to their respective location, reducing both travel time and cost.

With everything located under one roof within each Hi-Force training school, delegates can be provided with all the required elements, of both classroom theory and "hands on" practical training. All training facilities are equipped with an ECITB approved training rig, plus an extensive range of the latest Hi-Force hydraulic tools, including all the required ECITB bolting tools for delivery of ECITB Mechanical Joint Integrity Training. Similarly our service and repair training facilities are fully equipped, with all the required workshop equipment and tooling, to deliver high quality hydraulic tool service and repair training.

Hi-Force Dubai Training Facility

Hi-Force training courses are ideally suited for field sales engineers, sales office personnel, on-site supervisors and engineers, technicians and everyone else involved within the sales, service and repair, on-site supervision and operation of high pressure hydraulic tools, to a wide variety of industries worldwide.

Hi-Force is totally committed to improving the technical knowledge of our own employees, those of our Distributors and the many thousands of users, of Hi-Force hydraulic tools, throughout the world. Hi-Force's investment in world class training facilities, is testament to our ongoing commitment to not only offer products of the highest quality, but to also ensure that our network of regional offices and distributors continue to offer users the correct and proper technical advice and support, whilst discussing individual customer specific requirements for hydraulic tools.
